

NOA MONITORING RESULTS

- No NOA Exceedances for the month of April.
- NOA monitoring results were uploaded to www.RebuildPotrero.com

Asbestos air samples for the referenced project are analyzed by the Transmission Electron Microscopy (TEM/CARB) method. This method collects air samples on 25-millimeter (mm) diameter cassettes equipped with 50-mm conductive cowls mixed cellulose ester filter membranes. The BAAQMD analytical result for notification during NOA disturbance activities is greater than 0.016 structures per cubic centimeter (str/cc) of air.
